2. Hazard Identification

Approval

This product is an approved substance under the Hazardous Substances and New Organisms Act (HSNO, Approval HSR002544, Construction Products (Subsidiary Hazard) Group Standard 2020). The substance has been classified as hazardous according to the criteria in the Hazardous Substances (Hazard Classification) Notice 2020., and is classified as follows:

GHS Classes Hazard Statements

Skin irritation cat 2 H315 - Causes skin irritation. Eye damage cat 1 H318 - Causes serious eye damage.

Note: concrete is considered irritating to the skin under the classification system; however, there is a possibility of burns if wet concrete is left in contact with the skin for a prolonged time.

SYMBOLS

DANGER

HSNO classes (valid until April 2021) **Hazard Statement**

6.3A H315 - Causes skin irritation. 8.3A H318 - Causes serious eye damage. 9 1D H402 - Harmful to aquatic life.

Precautionary Statements

P101 - If medical advice is needed, have a product container or label at hand.

P102 - Keep out of reach of children.

P103 - Read label before use.

P264 - Wash hands thoroughly after handling.

Page 1 of 8 January 2025

P280 - Wear protective gloves/eye protection/face protection*.

P273 - Avoid release to the environment.

P302+P352 - IF ON SKIN: Wash with plenty of soap and water.

P332+P313 - If skin irritation occurs: Get medical advice/ attention.

P362 - Take off contaminated clothing and wash before re-use.

P305+P351+P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.

P310 - Immediately call a POISON CENTRE or doctor/physician.

P501 - Dispose of contents/container in accordance with local/regional/national/international regulation.

Composition / Information on Ingredients

Component	CAS/ Identification	Conc (%)
Cement	65997-15-1	10-70
Flyash	68131-74-8	0-5
Aggregates (may includes crystalline silica)	mixture	10-90
Chemical additives	mixture	0-5
Water	7732-18-5	30-50

May contain one or more of the following ingredients:

Component	CAS/ Identification	Conc (%)
Metal Oxides	mixture	3-6
Limestone	1317-65-3	0-5
Calcium sulphate hemihydrate	26499-65-0	0-5
Hexavalent Chromium	1333-82-0	<0.01
Crystalline Silica	14808-60-7	0-5

This is a commercial product whose exact ratio of components may vary. Trace quantities of impurities are also likely. Note: classifications for ingredients are confirmed through EPA records where available. If unconfirmed, and based on hazardous property information, the classifications are indicated in italics.

4. First Aid

General Information

You should call the National Poisons Centre if you feel that you may have been harmed, burned or irritated by this product. The number is 0800 764 766 (0800 POISON) (24 hr emergency service).

If medical advice is needed, have this SDS, product container or label at hand. If exposed or concerned: Get medical advice/ attention.

Recommended first aid facilities

Ready access to running water is recommended. Accessible eyewash is recommended.

Exposure

Swallowed Eve contact IF SWALLOWED: Do NOT induce vomiting. Rinse mouth. Contact a doctor if you feel unwell. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present

and easy to do. Apply continuous irrigation with water for at least 15 minutes holding eyelids

apart. Immediately call a POISON CENTER or doctor.

Skin contact IF ON SKIN: Wash with plenty of soap and water. If skin irritation occurs: Get medical

advice/attention. Wash contaminated clothing before reuse.

Inhaled IF INHALED: If breathing is difficult, remove to fresh air and keep at rest in a position

> comfortable for breathing. If patient is unconscious, place in the recovery position (on the side) for transport and contact a doctor. If experiencing respiratory symptoms: Immediately call a

POISON CENTER or doctor/physician.

Advice to Doctor

Treat symptomatically.

5. Firefighting Measures

Fire and explosion

There are no specific risks for fire/explosion for this chemical. It is non-combustible.

Page 2 of 8 January 2025

hazards:

Suitable extinguishing

substances:

Not applicable.

Unsuitable extinguishing

substances:

Unknown.

Products of combustion:

Protective equipment:

Product does not burn. Products will react exothermically with water. Contaminated water will

be strongly alkaline.

Products may decompose in a fire and produce toxic or corrosive fumes.

Self-contained breathing apparatus. Safety boots, non-flammable overalls, gloves, hat and eye

Hazchem code: NA

6. Accidental Release Measures

Containment If greater than 1000kg is stored, secondary containment is required. Emergency plans to

manage any potential spills must be in place. Prevent spillage from spreading or entering soil,

waterways or drains.

In the event of large spillage (>100kg) of the dry or wet mixture alert the fire brigade to **Emergency procedures**

location and give brief description of hazard.

Wear protective equipment to prevent skin, eye and respiratory exposure. Clear area of any unprotected personnel. Contain spill. Prevent by whatever means possible spillage from

entering drains, sewers, or water courses.

Collect products avoiding any dust formation, and seal in properly labelled containers or Clean-up method

drums for disposal. If contamination of crops, sewers or waterways has occurred advise local

emergency services.

Disposal Mop up and collect recoverable material into labelled containers for recycling or salvage.

Recycle containers wherever possible. This material may be suitable for approved landfill.

Dispose of only in accord with all regulations.

Precautions The dust may form an irritating atmosphere. Contaminated water will be strongly alkaline. Do

not allow contaminated water to enter the environment.

Wear protective equipment to prevent skin and eye contamination and the inhalation of dust.

Work up wind or increase ventilation.

7. Storage & Handling

Avoid storage of harmful substances with food. Store out of reach of children. Containers Storage

should be kept closed in order to minimise contamination. Keep in a cool, dry place. Avoid

contact with incompatible substances as listed in Section 10.

Keep exposure to a minimum, and minimise the quantities kept in work areas. Minimise dust Handling

generation and accumulation. See section 8 with regard to personal protective equipment

WEC CTEL

requirements. Avoid skin and eye contact and inhalation of dust.

Exposure Controls / Personal Protective Equipment

Workplace Exposure Standards

A workplace exposure standard (WES) has not been established by WorkSafe NZ for this product. There is a general limit of 3mg/m³ for respirable particulates and 10mg/m³ for inhaling particulates when limits have not otherwise been established.

NZ	
Workplace	
Exposure	
Standards	

Ingredient	WES-IWA	WES-STEL
Cement	3mg/m ³ 1mg/m ³ (respirable)	no data
Limestone	10mg/m ³	no data
Calcium sulphate	10mg/m ³	no data
hemihydrate	0.025mg/	no data
Chromium oxide	m^3	no data
	See crystalline silica	

Flyash Aggregates Crystalline Silica (all forms)

See crystalline silica 0.05mg/m³ (as respirable

no data no data

Engineering Controls

In industrial situations, it is expected that employee exposure to hazardous substances will be controlled to a level as far below the WES as practicable by applying the hierarchy of control required by the Health and Safety at Work Act (2015) and the Health and Safety at Work (General Risk and Workplace Management) Regulations 2016. Exposure can be reduced by process modification, use of local exhaust ventilation, capturing substances at the source, or other methods. If you believe airborne concentrations of mists, dusts or vapours are high, you are advised to modify processes or increase ventilation.

Personal Protective Equipment

General

Personal Protective Equipment (PPE) should not be used as the primary means of exposure protection, except in the event of an accident or emergency situation or where all other means of protection have proven inadequate.

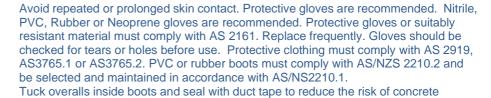

Clean PPE after use or dispose of as appropriate. Store PPE for re-use in a clean place. Regular training on the correct use of PPE should be provided. The correct fitting and use of respirators and where applicable the cleaning of respirators should be undertaken.

Protect eyes with goggles, safety glasses or full-face mask. Avoid wearing contact lenses. Select eye protection in accordance with AS/NZS 1337.

Skin

Eyes

Remove protective clothing and wash exposed areas with soap and water prior to eating, drinking or smoking. Take special care to ensure that cuts/abrasions or irritated skin are not exposed to this product. It is also important to ensure that wet concrete does not become trapped within gloves, boots or clothing - leaving concrete in contact with the skin for extended period of time may cause skin burns.

It is important that skin is also covered when concrete dust is created (e.g., sanding, grinding, crushing or cutting concrete). The dust may also irritate and/or damage the skin.

Respiratory

The product does not present an inhalation hazard when wet.

However, when dust is created a well fitted dust mask should be used (this is not recommended when exposure is close to the WES). Refer to SDS for Allied Concrete Ready Mix Concrete, dry.

Auto-ignition temperature

Page 4 of 8 January 2025

Upper & lower flammable limits not applicable

Corrosiveness May be corrosive when wet. Note that dust is also corrosive when mixed with water.

10. Stability & Reactivity

Stability This product is unlikely to react or decompose under normal storage conditions. This

product will not undergo polymerisation reactions. Keep dry until used.

Conditions to be avoided Incompatible groups **Substance Specific** Incompatibility

Containers should be kept closed in order to avoid contamination. Strong acids, ammonium salts, and aluminum metal.

Concrete dissolves in hydrofluoric acid producing corrosive silicon tetrafluoride gas. Silicates react with powerful oxidizers such as fluorine, chlorine, trifluorides, and oxygen

Does not readily decompose. Respirable dust particles may be generated when concrete

Hazardous decomposition

products **Hazardous reactions** is sawed, drilled, sanded or grinded.

Will not polymerise

11. Toxicological Information

Summary

The following summary is for wet concrete:

IF IN EYES: Contact with wet (unhardened) concrete, mortar, cement mixtures or concrete dust can cause effects ranging from irritation to serious eye damage/burns and blindness. The pH of the mixture is >12. Note: the level of irritation/damage is dependent on the quantity of the dust, the pH, and the length of time exposed. E.g., if dust is washed out of the eye immediately, the effects will be minor. However, if dust or wet concrete is left in contact with the eye, serious damage/blindness could result.

IF ON SKIN: Contact with wet (unhardened) concrete, mortar, cement, or cement mixtures can cause skin irritation, severe chemical burns (third degree). Drying concrete is hygroscopic, i.e. absorbs water. It will draw water away from any material it contacts-including skin. This may cause irritation - particularly in hot conditions or when sweating. Brief exposure to the skin (i.e., washed off immediately) will result in irritation. However, if the concrete or dust is left on the skin for an extended time (e.g., if inside boots or absorbed through overalls), burns to the skin are possible. Thickening of the skin and/or rash is also

IF SWALLOWED: Ingestion of this product may cause gastrointestinal irritation.

For toxicological information on the dry concrete or concrete dust, refer to the SDS "Allied Concrete Ready Mix Concrete, dry'

Supporting Data

Acute Oral The estimated LD₅₀ (oral, rat) for the mixture is > 5,000 mg/kg.

> Dermal The estimated LD₅₀ (dermal, rat) for the mixture is > 5,000 mg/kg.

Inhaled The wet concrete is not considered to be harmful if inhaled. The estimated LC₅₀

(inhalation, rat) for the mixture is >5 mg/L (dust mist).

Eye This mixture is considered to be an eye corrosive. pH >12

Skin This mixture is considered to be a skin irritant.

Sensitisation There is evidence that chromium present in some cement mixtures may induce

occupational asthma and skin sensitisation (allergic reactions). This mixture contains less

than 0.01% hexavalent chromium and hence is not considered sensitising.

Mutagenicity No ingredient presents at concentrations > 0.1% is considered a mutagen.

Carcinogenicity This mixture may contain crystalline silica. Crystalline silica inhaled in the form of quartz

or cristobalite from occupational sources is carcinogenic to humans (IARC Group 1). This mixture is wetted concrete and no respirable particles are present. Refer to SDS for dry

concrete is dust or dry concrete is present.

No data for mixture is available. No ingredient present at concentrations > 0.1% is Reproductive / **Developmental**

considered a reproductive or developmental toxicant or have any effects on or via

Systemic This mixture may contain crystalline silica. Crystalline silica triggers STOT RE cat 1

> classification if it is in the form of a fine respirable dust in an occupational (chronic exposure) setting. This mixture does not contain respirable particles (wetted). Refer to

SDS for dry concrete is dust or dry concrete is present.

Aggravation of People with existing lung conditions may be at a higher risk of further adverse health existing conditions effects (as above). Smokers have an increased risk of lung cancer and silicosis.

12. Ecological Data

Summary

Wet concrete is considered to be harmful in the environment when in a soluble form. This is primarily due to the high pH of the product.

Page 5 of 8 January 2025

Supporting Data

Aquatic No data for mixture is available. Using EC₅₀'s for ingredients, the estimated EC₅₀ for the

mixture is between 1 and 100 mg/L. This implies that concrete should be considered

harmful in the aquatic environment.

Water contaminated with this product is alkaline and should not be allowed to enter the

environment.

Bioaccumulation Not applicable

Degradability Not applicable (predominantly natural products)

No data available for the mixture. The soil toxicity value for the mixture is estimated to be Soil

≥ 100 mg/kg.

Terrestrial vertebrate This product is not considered harmful to terrestrial vertebrates. No LC₅₀ (diet) data for

ingredients are available and the classification is based on the LD₅₀ (oral) – see section

11 – oral toxicity.

Terrestrial invertebrate

The mixture is not considered harmful to terrestrial invertebrates.

Biocidal

Not designed as a biocide.

13. Disposal Considerations

Restrictions There are no product-specific restrictions, however, local council and resource consent

conditions may apply, including requirements of trade waste consents.

Disposal method Disposal of this product must comply with the Hazardous Substances (Disposal) Notice

2017 and the requirements of the Resource Management Act for which approval should be sought from the Regional Authority. The substance must be treated and therefore

rendered non-hazardous before discharge to the environment.

Contaminated packaging Disposal of contaminated packaging must comply with the Hazardous Substances

(Disposal) Notice 2017 clause 12. Ensure that the package is rendered incapable of containing any substance and is disposed in a manner that is consistent with the requirements of the substance it contained and the material of the package. If possible,

reuse or recycle packaging.

14. Transport Information

Land Transport Rule: Dangerous Goods 2005 - NZS 5433:2007

There are no specific restrictions for this product (not a dangerous good).

UN number: NA Proper shipping name: NA Class(es) NA Packing group: NΑ NA NA **Precautions:** Hazchem code:

15. Regulatory Information

This product is an approved substance under the Hazardous Substances and New Organisms Act (HSNO). Approval code: HSR002544: Construction Products (Subsidiary Hazard) Group Standard 2020. All ingredients appear on the NZIoC.

Specific Controls

Note: the controls apply to the wet product, and to the dust of hardened concrete.

Key workplace requirements are:

SDS To be available within 10 minutes in workplaces storing any quantity.

Inventory An inventory of all hazardous substances must be prepared and maintained.

Packaging All hazardous substances should be appropriately packaged including substances

that have been decanted, transferred or manufactured for own use or have been

supplied

Labelling Must comply with the Hazardous Substances (Labelling) Notice 2017.

Emergency plan Required if > 1000kg is stored.

Certified handler Not required. **Tracking** Not required.

Bunding & secondary containment Required if > 1000kg is stored. Required if > 1000kg is stored. Signage

Location compliance certificate Not required. Flammable zone Not required. Fire extinguisher Not required.

Page 6 of 8 January 2025

Note: The above workplace requirements apply if only this particular substance is present. The complete set of controls for a location will depend on the classification and total quantities of other substances present in that location.

Other Legislation

In New Zealand, the use of this product may come under the Resource Management Act and Regulations, the Health and Safety at Work Act 2015 and the Health and Safety at Work (General Risk and Workplace Management) Regulations 2016, local Council Rules and Regional Council Plans.
